

Engineering Portal

What is it?

A subscription-based cloud solution to help manufacturing companies control and track departmental tasks, processes, and documents. The Portal can be used to manage product design changes, assign manufacturing tasks, monitor quality processes, archive compliance documentation, and communicate with suppliers. The Portal can also help you streamline HR, AP/AR, and other administrative applications - and it comes with powerful electronic document routing and archival functionality. This solution is completely scalable, easy-to-use, and does not require the purchase of computer hardware, software, or investment in additional IT resources.

What does it do?

- Manages company-wide tasks, tracks progress, and assures that project deadlines are met
- Provides management with individual and departmental productivity metrics
- Provides engineers with key tools to work and collaborate electronically
- Helps meet key compliance mandates (ISO, TS16949, etc.), and helps prepare your company for audits
- Provides both suppliers and customers with an electronic gateway for requests, forms, and status updates

Who can use it?

- **Executives & Managers:** Use dashboard views to manage your enterprise using real-world metrics that report employee and departmental efficiency
- **Product Design Teams:** Streamline the change order process and assure up-to-date content using electronic document revision and version controls
- **Quality Control:** Implement "best practices" using electronic processes, update SOP documentation, and deploy electronic Corrective/Preventative Action forms & workflows
- **HR, AP/AR, Vendors, and Customers**

What problems does it solve?

- Eliminates communication problems by connecting the tasks and monitoring the progress of all staff and departments
- Solves inefficiencies of paper-driven processes through electronic processing
- Prevents design errors through electronic change order and version controls
- Reduces quality control challenges by pinpointing staff and procedural failures
- Eliminates the cost and risk exposure of lost/missing files by providing redundancy

How does it work?

- Engineering Portal is a subscription-based service
- No additional hardware or software is required - all your company needs is a high-speed internet connection
- Works in conjunction with existing IT systems, but does not require IT integration
- Simple "point and click" interface allows virtually any employee or department to benefit immediately

Financial Benefits:

- No big upfront investment required
- Pay as you go, and cancel if your company does not see the expected results
- Deploy in days, without allocating internal IT resources to implement
- Completely scalable: You only pay for the users and functionality that you need today - but can still add-on or scale back the solution as your company's needs change

How to get started:
